

Apache HTTP Server Verification (CentOS Stream 9)

This system is configured with Apache HTTP Server (httpd) running on CentOS Stream 9, confirming a standard, enterprise-aligned web stack suitable for staging or production environments. The Apache binary and RPM package manager were both used to validate installation consistency and version accuracy.

Apache HTTP Server is installed and running on CentOS Stream 9. The system is using httpd version 2.4.62 (EL9 build), verified via both the Apache binary and RPM package manager.

A terminal window with a dark background and light-colored text. The window title bar shows 'egarrido@stage-web-eg3:~' and standard window controls. The terminal output shows the execution of 'httpd -v' and 'rpm -qa httpd' commands, verifying the Apache version and RPM package details.

```
egarrido@stage-web-eg3:~  
[egarrido@stage-web-eg3 ~]$ httpd -v  
Server version: Apache/2.4.62 (CentOS Stream)  
Server built:   Aug 16 2025 00:00:00  
[egarrido@stage-web-eg3 ~]$ rpm -qa  
-bash: rpm-qa: command not found  
[egarrido@stage-web-eg3 ~]$ rpm -qa httpd  
httpd-2.4.62-7.el9.x86_64  
[egarrido@stage-web-eg3 ~]$
```
