A symbolic link named elements is created in the user's home directory pointing to the web application file /var/www/html/ariclaw/elements.html.

The ln -s command establishes the symlink, and ls -l confirms it by displaying the link target and permissions.

The output verifies that elements correctly resolves to the intended HTML file, allowing the file to be accessed or referenced from the user's home directory without duplicating content.

```
egarrido@stage-web-eg3:~    ×    +  ∨                                                                     —  □  ×
[egarrido@stage-web-eg3 ~]$ ln -s /var/www/html/ariclaw/elements.html ~/elements
[egarrido@stage-web-eg3 ~]$ ls -l ~ | grep elements
lrwxrwxrwx.  1 egarrido egarrido   35 Oct  1 14:18 elements → /var/www/html/ariclaw/elements.html
[egarrido@stage-web-eg3 ~]$
```
